

MINESAFE INTERNATIONAL

2017 The Resource Industry Health & Safety Conference

1–3 May 2017 | Perth, Australia

The Australasian Institute of Mining and Metallurgy (AusIMM) is re-establishing the popular Minesafe International conference series in conjunction with the WA Department of Mines and Petroleum.

This conference series is designed to ensure that health and safety within the resources industry maintains at an appropriate and ever increasing position of awareness. The conference will be inclusive of all sectors in the resources industry (minerals, oil and gas).

The conference will provide the appropriate professional forum for the presentation of peer reviewed papers to the elite safety practitioners in the resources industry, presented by those personnel responsible for, passionate about, researching in and living with health and safety across the various sectors of our resources industry.

This will provide the opportunity for Australian and international key health and safety practitioners to discuss their findings/research, network and share their achievements and challenges in one of the great mining hubs in the world – Perth, Western Australia.

The Minesafe International 2017 – The Resource Industry Health & Safety Conference organising committee invites you to prepare an abstract and to be part of this inaugural conference.

Richard Flanagan FAusIMM(CP)

Conference Chair, Minesafe International 2017 – The Resource Industry Health & Safety Conference

CALL FOR PAPERS

Submission deadline: Monday 11 July 2016

We invite authors wishing to present at Minesafe International 2017 to submit an abstract not exceeding 300 words, in English, to the Minesafe International 2017 Speakers' Portal, available via the website.

CONFERENCE THEMES

Emerging issues around exposure to contaminants

- Atmospheric contaminants
- Radiation
- International standard setting

Psychosocial hazard management

- Mental health and well-being and the work place
- Fit for work
- Caring for workers and their families
- Coping with long commute rosters

Research developments in health and safety

- nDPM (nano Diesel Particulate Matter)
- Lessons from 'Big Data' analysis
- Latest technologies and innovations that can enhance health and safety

Safety case in the resources sector

- Process safety
- Risk assessment
- ALARP (As Low as Reasonably Practicable)
- Major accident events

Safety management systems and principal hazard management plans

- New OHS requirements under the Work Health and Safety (Resources) Act 2016
- Mine management requirements
- Safety management
- Emergency and disaster response planning
- Economic impacts on performance

Legislation and corporate responsibilities

- Legislation development
- Enforceable standards
- The role of codes
- Corporate responsibilities and liability
